

Microsoft ADC Cybersecurity Skilling Program

Week 4 Assignment

LAB 3

SC-900 Learning Path

Student Name: ALEX EVANS NJIRU MBOGO

Student ID: ADC-CSS02-25064

Lab: Explore the Service Trust Portal

This lab maps to the following Learn content:

- Learning Path: Describe the capabilities of Microsoft Priva and Microsoft Purview
- Module: Describe Microsoft's Service Trust portal and privacy capabilities
- Unit: Explore the Service Trust Portal

Lab scenario

In this lab, I explore the features and content available from the Service Trust Portal. You'll also visit the Trust Center to view information about Privacy at Microsoft.

Task 1

explore the Service Trust portal and the different types of content available, learn how to access reports, and how to save reports to your library.

The screenshot shows a web browser window displaying the 'My Library' page of the Microsoft Service Trust Portal. The page title is 'My Library' and the subtitle is 'Documents'. Below the title, there are filters for 'Dates' and 'Cloud Service', and a 'Notification Settings' link. A table lists documents with columns for 'Title', 'Series', 'Description', and 'Last Updated'. The first document listed is 'Microsoft General - Nuance Dragon Medical One - ISO 27001 Certificate (2024)'. To the right of the browser window, a task list is visible, numbered 4 through 9, detailing steps for exploring the portal, selecting documents, and saving them to the library. The task list includes instructions on how to select a document, note its description, and save it to the library. The browser window also shows the address bar with the URL 'https://labclient.labondemand.com/LabClient/1cd72f0f-3026-467f-80d7-3545a7ca7198' and the page title 'Describe the capabilities of Microsoft Compliance Solutions — Mozilla Firefox'.

Task 2

In this task, you'll visit the Trust Center and navigate to information that describes Privacy at Microsoft.

20% Tasks Complete

< Previous Next >

Task 2

visit the Trust Center and navigate to information that describes Privacy at Microsoft.

The screenshot shows a web browser window with the address bar displaying <https://www.microsoft.com/en-us/trust-center/privacy>. The page content includes the Microsoft logo, a 'Trust Center' dropdown menu, and a section titled 'Data protection and privacy' with the text: 'We understand that when you use our cloud services, you're entrusting us with one of your most valuable assets—your data.' Below this is a video player showing a woman looking at a screen.

On the right side of the browser window, there is a task list titled 'Describe the capabilities of Microsoft Compliance Solutions — Mozilla Firefox'. The task list includes the following items:

- 12. To return the Service Trust Portal home page, select the link **Service Trust Portal** at the top of the page.
- Task 2**
- In this task, you'll visit the Trust Center and navigate to information that describes Privacy at Microsoft.
- 1. From the Service Trust Portal home page, scroll down to the **Reports, Whitepapers, and Artifacts** category. Select **Privacy and Data Protection**.
- 2. In addition to listing all applicable documents, there is a description of the category followed by a link to Learn more. Select **Learn more**.
- 3. A new browser page opens to the Microsoft Trust Center where you find more information, including information about privacy and much more. Explore the contents of this page and navigate through different links.
- 4. Close all the open browser tabs.

At the bottom of the task list, there is a 'Review' section showing '22% Tasks Complete' and buttons for 'Previous' and 'Next'.

Here I explored some of the options available under the Service Trust Portal and how to use the My Library feature to save documents for future review. Additionally, you visited the Trust Center to access and review information about privacy at Microsoft.

Lab: Explore the Microsoft Purview portal and Compliance Manager

This lab maps to the following Learn content:

- Learning Path: Describe the capabilities of Microsoft Privacy and Microsoft Purview
- Module: Describe the data compliance solutions of Microsoft Purview
- Unit: Describe Compliance Manager

Lab scenario

In this lab, we explore the Microsoft Purview portal home page and ways in which the capabilities of Compliance Manager can help organizations improve their compliance posture.

The screenshot shows a web browser window displaying the Microsoft Purview portal. The browser's address bar shows the URL: <https://purview.microsoft.com/home?tid=541ae168-6ca5-47e7-8e...>. The portal's header includes a navigation menu with links for Home, Solutions, Learn, and Settings. A large welcome message reads: "Welcome to the new Microsoft Purview portal! The new Microsoft Purview portal brings together data governance, data security, and compliance solutions to help you quickly discover and protect data stored across platforms and apps including Microsoft 365, Microsoft Azure, Amazon Web Services, Snowflake, and more. [Learn more](#)". Below this message is a table comparing the new portal with classic portals.

	Protect sensitive info across your data estate	Unified governance & compliance solutions	Upgraded, modern experience
New portal	✓	✓	✓
Classic portals	Limited support	Split between separate portals*	Classic look and feel

*Microsoft Purview compliance portal and Microsoft Purview governance portal

At the bottom of the table are two buttons: "Get started" and "Go to classic portal".

On the right side of the screenshot, there is a lab instruction panel titled "Describe the capabilities of Microsoft Compliance Solutions — Mozilla Firefox". It shows a progress bar at 100% and a list of instructions. The first three instructions are checked, and the last one is not. Below the instructions is a section titled "Task 2" with a progress bar at 28% and buttons for "Previous" and "Next".

Instructions:

3. From the left navigation pane of the Microsoft 365 admin center, select **Show all**.
4. Under Admin centers, select **Compliance**. A new browser page opens with a pop-up window welcoming you to the new Microsoft Purview portal. At the bottom of the page, select the box next to **I agree to the terms of data flow disclosure and Privacy statements**, then select **Get started**.
5. The card section on the home page shows you, at a glance, how your organization is doing with your compliance posture, what solutions are available for your organization, available trials and recommendations, and more.
6. View the information on the landing page. Scroll down to see your compliance posture status, information related to "Know your data", and more.
7. Scroll up and select the tile that says **View all solutions**.
8. Leave the browser tab open.

Lab: Explore sensitivity labels in Microsoft Purview

This lab maps to the following Learn content:

- Learning Path: Describe the capabilities of Microsoft Priva and Microsoft Purview
- Module: Describe the data security solutions of Microsoft Purview
- Unit: Describe sensitivity labels and policies in Microsoft Purview Information Protection

Lab scenario

In this lab, we explore the capabilities of sensitivity labels. We go through the settings for existing sensitivity labels that have been created and the corresponding policy to publish the label. Then we see how to apply a label and the impact of that label, from the perspective of a user.

Task 1

Gain an understanding of what sensitivity labels can do by going through the process of creating a new label and creating a policy to publish the label.

The screenshot displays the Microsoft Purview Information Protection portal. The left navigation pane includes sections for Home, Solutions, Learn, Settings, Information Protection, and Compliance Manager. The main content area is titled 'Sensitivity labels' and contains an overview section explaining that sensitivity labels are used to classify email messages, documents, sites, and more. Below the overview, there is a list of 6 items, with columns for Name and Priority. On the right side of the screen, a sidebar provides instructions for the lab, including steps to open the browser tab, sign in, and navigate through the portal. The sidebar also indicates '43 Minutes Remaining' and '45% Tasks Complete'.

Lab: Explore insider risk management in Microsoft Purview

This lab maps to the following Learn content:

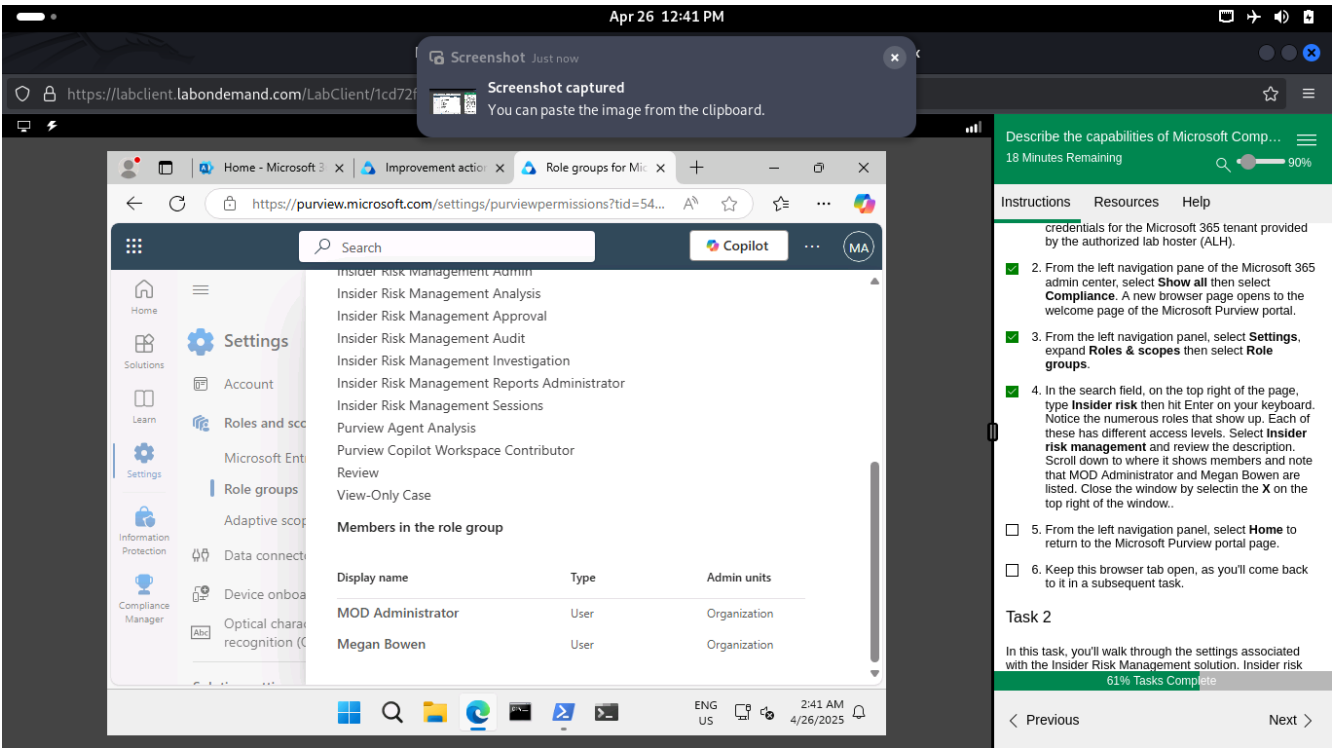

- Learning Path: Describe the capabilities of Microsoft Priva and Microsoft Purview
- Module: Describe the data security solutions of Microsoft Purview
- Unit: Describe insider risk management in Microsoft Purview

Lab scenario

In this lab, We walk through the process of setting up an insider risk policy, along with the basic prerequisites to configure and use insider risk management policies. Note: this lab will only provide visibility into what is required for setting up Insider risk management and options associated with creating a policy. This lab does not include a task to trigger the policy, as the number of events that would need to occur to trigger a policy and the time required are outside of the scope of this exercise.

Task 1

In this task I , as the global administrator, learned how to enable for Insider Risk Management. we add users to the Insider Risk Management role group to ensure that designated users can access and manage insider risk management features.

The screenshot shows the Microsoft Purview portal interface. The main content area displays the 'Role groups for Microsoft Purview' page. The left navigation pane shows the 'Settings' section expanded, with 'Role groups' selected. The main content area shows a list of role groups under the 'Insider Risk Management' category. Below this, there is a table titled 'Members in the role group' for the 'MOD Administrator' role group. The table has three columns: 'Display name', 'Type', and 'Admin units'. The members listed are 'MOD Administrator' and 'Megan Bowen', both of type 'User' and with 'Organization' as their admin unit.

On the right side of the screen, there is a task list titled 'Describe the capabilities of Microsoft Comp...' with a progress bar showing '18 Minutes Remaining' and '90%' completion. The task list includes instructions for the lab, such as 'From the left navigation pane of the Microsoft 365 admin center, select Show all then select Compliance' and 'From the left navigation panel, select Settings, expand Roles & scopes then select Role groups'.

Display name	Type	Admin units
MOD Administrator	User	Organization
Megan Bowen	User	Organization

Task 2

In this task, we walk through the settings associated with the Insider Risk Management solution.

Insider Risk Management settings

Policy timeframes

The timeframes you choose here go into effect for a user when they trigger a match for an insider risk policy. For example, if you set the activation window to 15 days and past activity detection to 30 days, and then a user triggers a policy a match on July 1st, that policy will retrieve user activity from 30 days ago (June 1st) and will continue to record new activity for 15 more days (July 16th).

Policy timeframes

Choose how long policies will actively detect activity for users and is triggered when a user performs the first activity matching a policy. Past activity detection Determines how far back a policy should go to detect user activity and is triggered when a user performs the first activity matching a policy. Leave the default values.

Intelligent detections

Review the options here. Note the domains settings and how they relate to the indicators.

Explore other items listed in the settings and note that many are in preview.

3. From the left navigation pane, select **Solutions**, then select **Insider Risk Management**.

I. On the page to Decide whether to use default or customer indicator thresholds, leave the default setting **Apply thresholds provided by Microsoft**, then select **Next**.

j. Finish: review the settings, select **Submit**.

k. Review the description of what happens next then select **Done**.

3. You're back on the Policies tab of the Insider risk management page. The policy you created will be listed. If you don't see it, select the **Refresh** icon.

4. As an admin, you can immediately start assigning risk scores to users based on activity detected by the policies you selected. This bypasses the requirement that a triggering event (like a DLP policy match) is detected first. An admin would do this by selecting the empty square next to the policy name to select the policy, then select **Start scoring activity for users**, which is shown above the policy table. A new window opens that requires the admin to populate the available fields. Leave the fields empty as you won't configure this option, but for more information on why an admin would want to do this, select **Why would I do this??**. Exit the window by selecting the **X** on the top right of the window.

5. From the left navigation panel, select **Home** to return to the landing page of the Microsoft Purview portal.

Lab: Explore eDiscovery

This lab maps to the following Learn content:

- Learning Path: Describe the capabilities of Microsoft Priva and Microsoft Purview
- Module: Describe the data compliance solutions of Microsoft Purview
- Unit: Describe eDiscovery

Lab scenario

In this lab we go through the steps required for setting up eDiscovery:

- setting up role permissions
- creating an eDiscovery case
- creating an eDiscovery hold and creating a search query.

Task 1

The screenshot displays the Microsoft Purview eDiscovery Manager settings page in a browser. The page title is "Describe the capabilities of Microsoft Compliance Solutions — Mozilla Firefox". The URL is "https://labclient.labondemand.com/LabClient/1cd72f0f-3026-467f-80d7-3545a7ca7198". The page shows the "eDiscovery Manager" settings, including the "Role group name" (eDiscovery Manager) and "Role group description". Below these are the "Roles in the role group" list, which includes Case Management, Communication, Compliance Search, Custodian, Export, and Hold. A sidebar on the left shows navigation options like Home, Settings, Account, Roles and scopes, and Microsoft Entra ID. A task pane on the right provides instructions for setting up eDiscovery, including steps for selecting roles and scopes, entering eDiscovery in the search field, and selecting the eDiscovery Manager role group. The task pane also shows a progress bar indicating 75% completion.

welcome page of the Microsoft Purview portal.

3. From the left navigation pane, select **Settings**, expand **Roles and scopes**, then select **Role groups**.

4. In the search field, on the top, right of the page, enter **eDiscovery** then hit Enter on your keyboard. Select **eDiscovery Manager**.

5. Select **Edit**. For the purpose of this lab, you'll set yourself as MOD administrator as the eDiscovery Manager and administrator. In practice, you would designate specific users for specific roles.

a. The "Manage eDiscovery Manager" page allows you to add users to the role of eDiscovery manager.

b. Select **Choose users**. Search for and select **MOD Administrator** then press **Select** at the bottom of the page, then select **Next**.

c. On the "Manage eDiscovery Administrator" page, select **Choose users**. Search for and select **MOD Administrator** then press **Select** at the bottom of the page, then select **Next** and then **Save**.

d. On the "You successfully updated the role group" page, select **Done**.

6. Keep this browser tab open, as you'll use it in the next task.

Task 2

In this task you, as an eDiscovery Administrator (MOD admin is an eDiscovery administrator), will create a case to start using eDiscovery (Standard).

1. You should still be on the compliance portal roles page. If you closed the browser tab from the previous task, open a new browser tab and enter **compliance.microsoft.com** to get to the Microsoft Purview portal.
2. From the left navigation panel, under Solutions, expand **eDiscovery** then select **Standard Cases**.
3. From the top of the eDiscovery (Standard) page, select **+ Create a case**.
4. In the New case window, enter a Case name, **SC900 Test Case** then select the **Save** at the bottom of the page.
5. The case should now appear on the list.
6. As the creator of the case and because you have eDiscovery Administrator privileges, you can begin to work with it.
7. Keep this browser tab open, as you'll use it in the subsequent task.

a hold for items based on a query that you can create. You can choose to use the Query builder to create a query or for more advanced users, you can use the KQL editor. For this exercise, you want the hold to preserve all content in the specified location for the specified user, so you will not create a query.

9. Review your settings and select **Submit**, it may take a minute, then select **Done**. The Test hold should appear on the list. If you don't immediately see it, select **Refresh**.
10. Keep this browser tab open, as you'll use it in the subsequent task.

Task 4

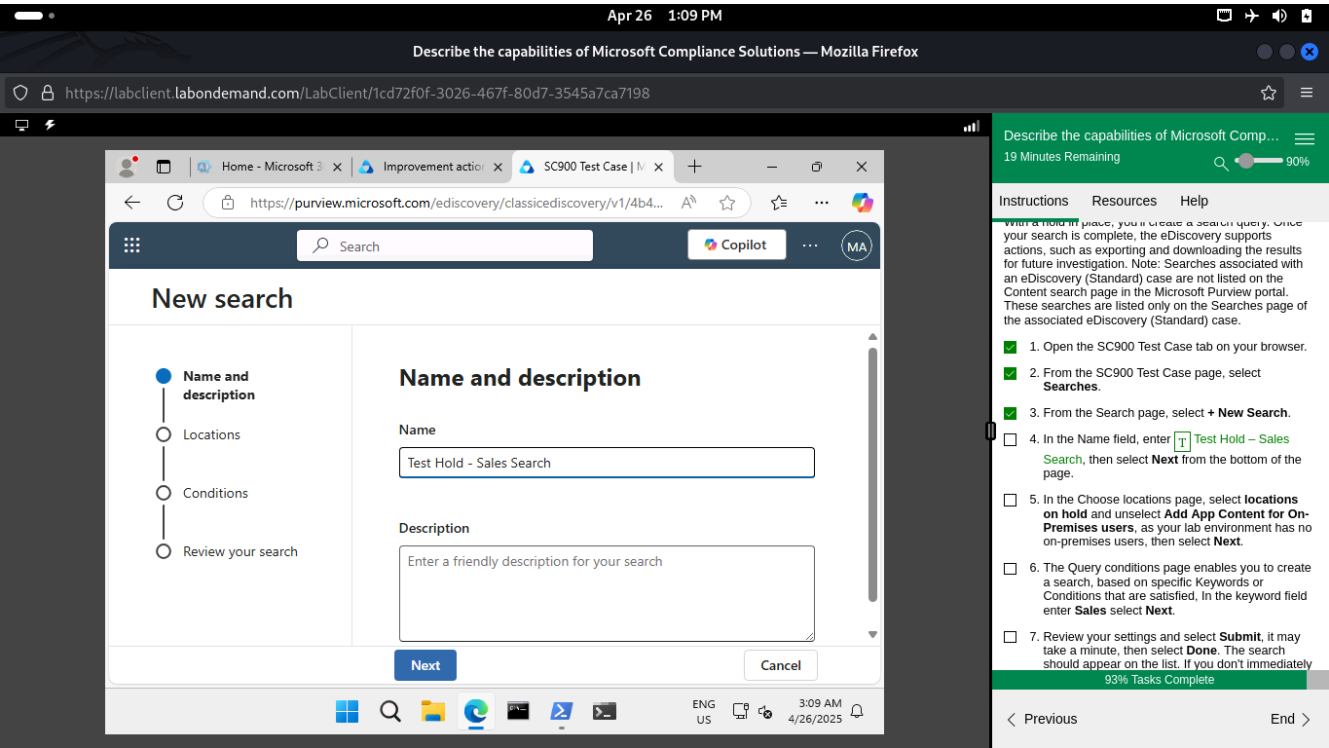

With a hold in place, you'll create a search query. Once your search is complete, the eDiscovery supports actions, such as exporting and downloading the results for future investigation. Note: Searches associated with an eDiscovery (Standard) case are not listed on the Content search page in the Microsoft Purview portal. These searches are listed only on the Searches page of the associated eDiscovery (Standard) case.

1. Open the SC900 Test Case tab on your browser.
2. From the SC900 Test Case page, select **Searches**.

< Previous End >
