

Level 3

Title: Exposed Password File in Source

Analyst: Alex Mbogo

Target: Hack This Site

Approach:

- Viewed page source
- Identified reference to a .php file
- Accessed file directly via URL

Finding:

- Sensitive file (file.php) publicly accessible.
- Password retrieved (e.g., 7a2b . . .)

Lesson: Never expose sensitive files or backend logic through direct URLs

Disclaimer: For educational purposes only

Scenario

This time Network Security Sam remembered to upload the password file, but there were deeper problems than that.

I found a file.php in the source code where password is pass is 7a2b.....
