

Level 4

Title: Hardcoded Password in Client-Side Script

Analyst: Alex Mbogo

Target: Hack This Site

Approach:

- Inspected page source and embedded scripts
- Identified password hardcoded within client-side code
- Extracted password directly without interacting with authentication logic

Finding:

- Password stored in plaintext within client-side script
- Easily accessible to anyone viewing page source

Lesson:

- Never store sensitive data in client-side code
- Authentication logic and secrets must be handled server-side
