

Level 2

Title: Password File Not Uploaded

Analyst: Alex Mbogo

Target: Hack This Site

Approach:

- Observed script loads password from a file
- File was missing from server
- Bypassed authentication by exploiting logic flaw

Finding: Authentication depended on external file that didn't exist

Lesson: Always validate dependencies and handle missing resources securely

Disclaimer: For educational purposes only

Scenario

Network Security Sam set up a password protection script. He made it load the real password from an unencrypted text file and compare it to the password the user enters. However, he neglected to upload the password file...
